

IT-LABEL

THE IT-LABEL NETWORK

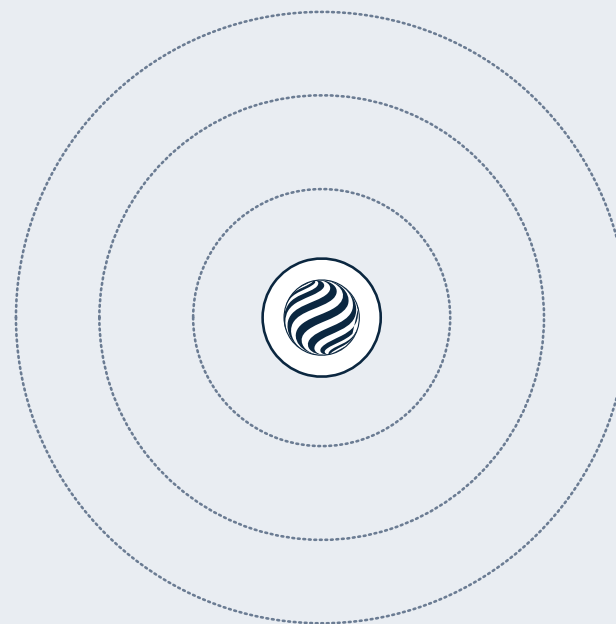

Who does what in the IT-Label network

The standard, the partners and their role, in eight steps.

01 THE STANDARD

At the centre: one standard.

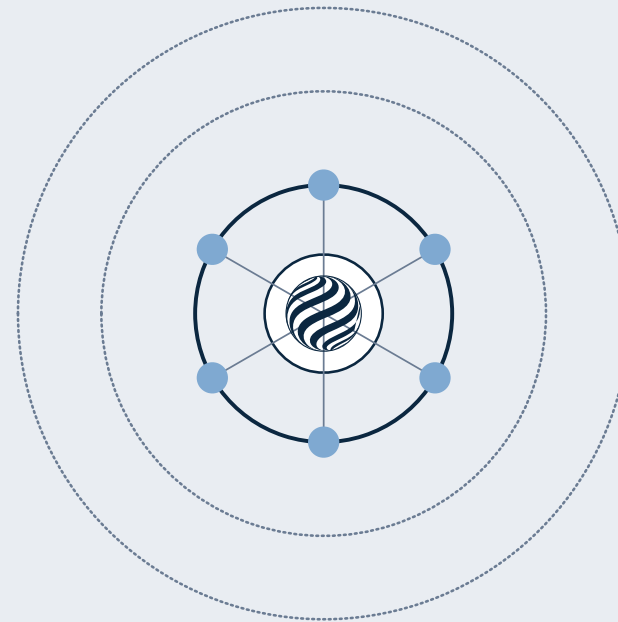

IT-Label manages the method, the levels and the public register. Everyone in the network works with it.

02 CERTIFIED PARTNERS

Independent inspectors.

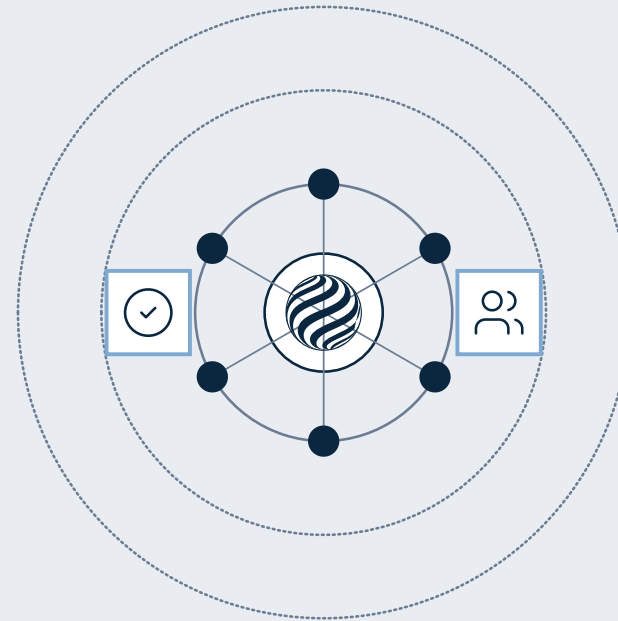

Certified Partners carry out the pre-inspections, certifications and audits, using the same method.

03 THE ACADEMY

Trained and tested.

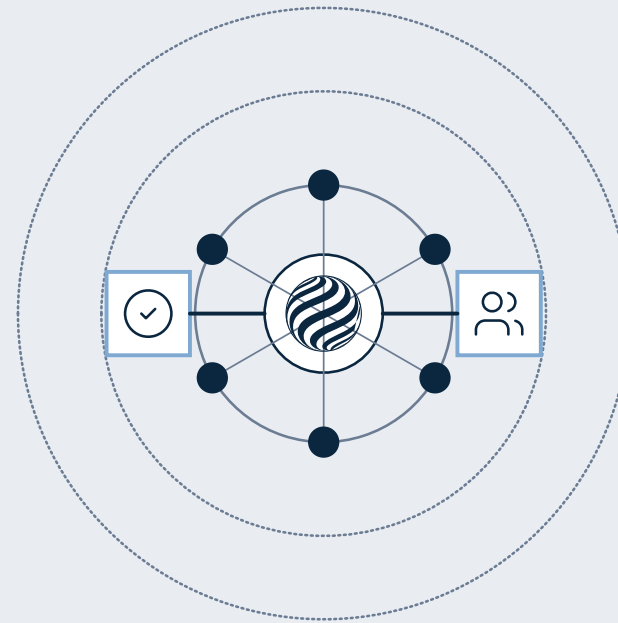

Inspectors take the IT-Label Academy. From 1 April 2027, only a certified inspector can sign a report.

04 KNOWLEDGE

Knowledge that is shared.

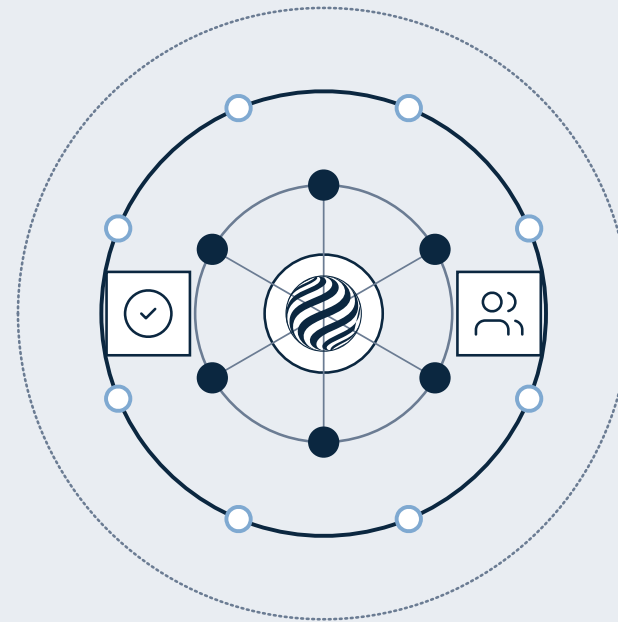

The Knowledge collective writes and tests the knowledge. In the Knowledge Community, partners help each other.

05 IMPLEMENTATION

IT companies and installers.

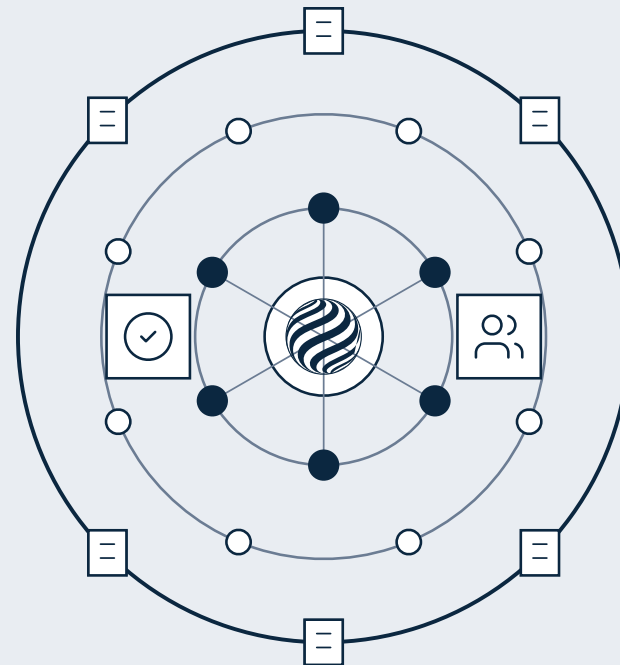

They help buildings improve: installing, renewing and fitting out, based on the advice.

06 CLIENTS

For everyone in real estate.

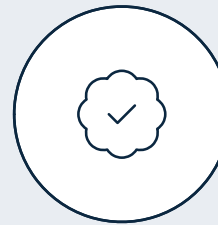

Owners, tenants, brokers and investors use the label to choose, compare and improve.

07 INDEPENDENT

The assessor does not sell an outcome.

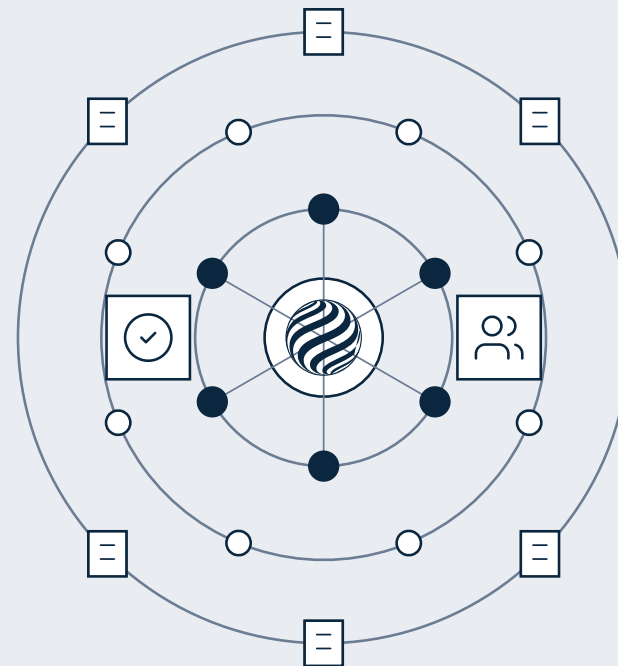

A Certified Partner has no interest in a higher or lower outcome. That is what makes the label reliable.

08 GROWING TOGETHER

Every building makes the network stronger.

More labelled buildings means more demand for inspections, improvements and management, for everyone in the network.

Become part of the network.
