

IT-LABEL

THE IT-LABEL IN ONE STORY

The IT-Label and the five services, explained

The label, the six areas and the five services, in ten steps.

01 THE QUESTION

"Fast internet" is a promise.

Tenants, buyers and investors want to know what a building really delivers digitally. A brochure does not answer that.

02 THE IT-LABEL

One label for the digital quality of a building.

From IT5 SHELL to ITI+ PREMIUM: clear at a glance what a building delivers, as clear as the energy label.

03 SIX AREAS

Assessed in six areas.

From the connection in the street to the systems in the building.

Connectivity

Infrastructure

Performance

Scalability

Integration

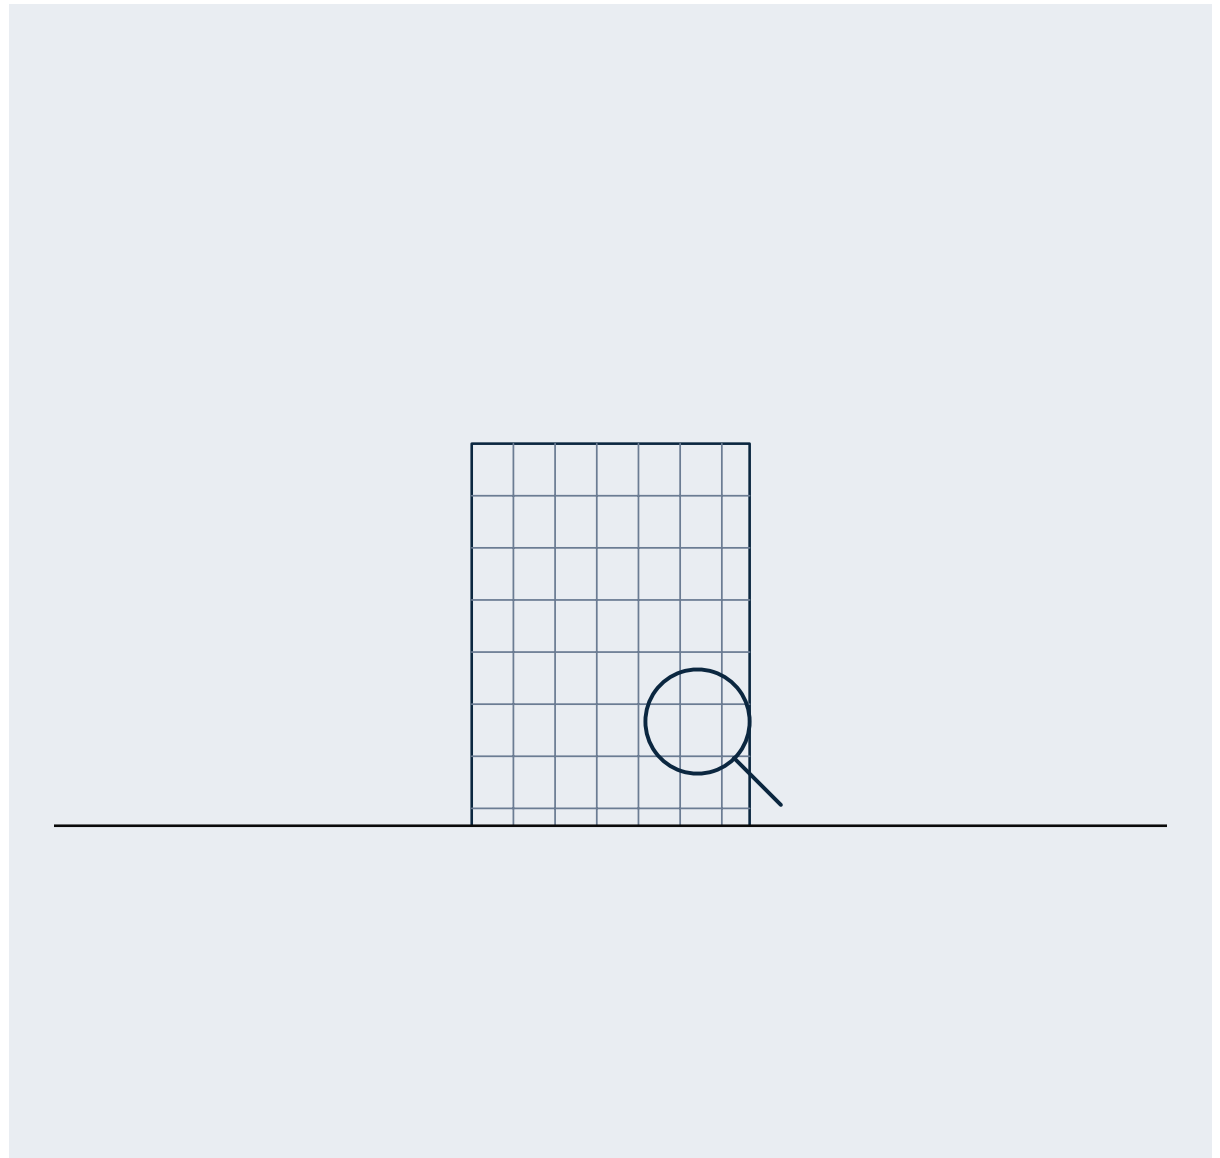

Smart Building

04 INDEPENDENT

Determined by a Certified Partner.

On site and using one method. That way, an
IT2 in Rotterdam means the same as in
Groningen.

05 PRE-INSPECTION

A quick first indication.

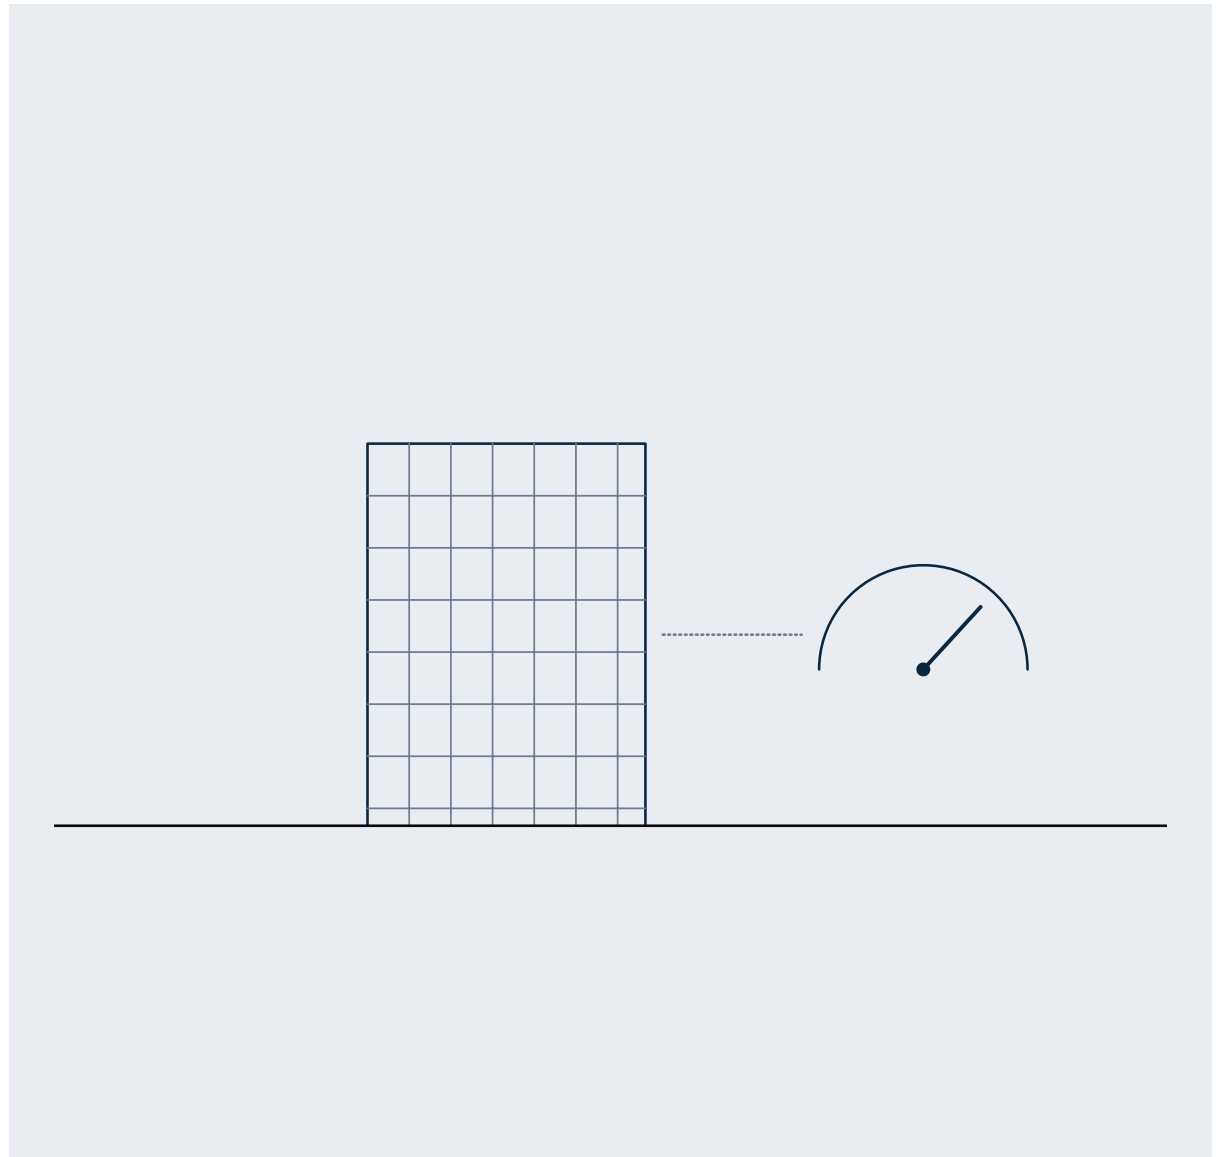

A Certified Partner visits and gives an expected level, the strengths and the points for attention.

06 CERTIFICATION

The official IT-Label.

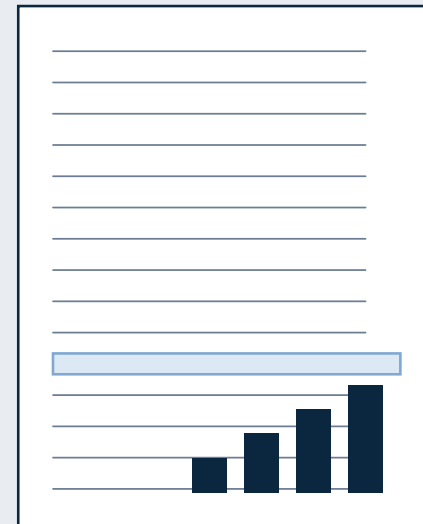

A full audit with measurements of the actual performance. The certificate is valid for two years.

07 DIGITAL DUE DILIGENCE

Certainty when buying or selling.

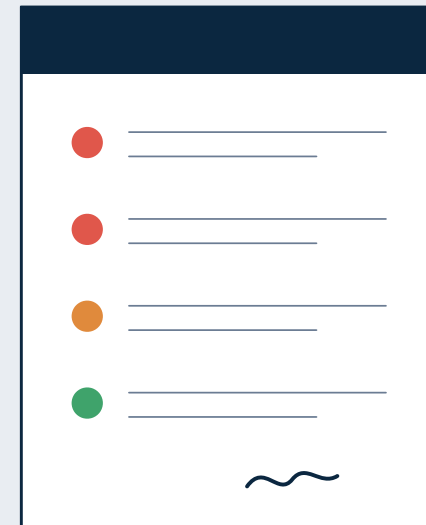

The digital infrastructure examined during a transaction, with the risks and the cost of improvement.

08 SECURITY AUDIT

Your Wi-Fi, network and server room secure.

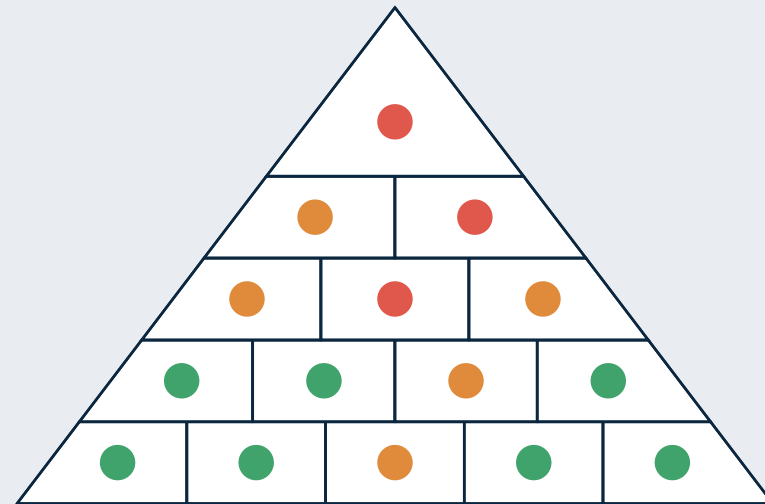

A physical on-site audit, with a report of the risks and advice.

09 SMART CONTROL

Your IT in view, always.

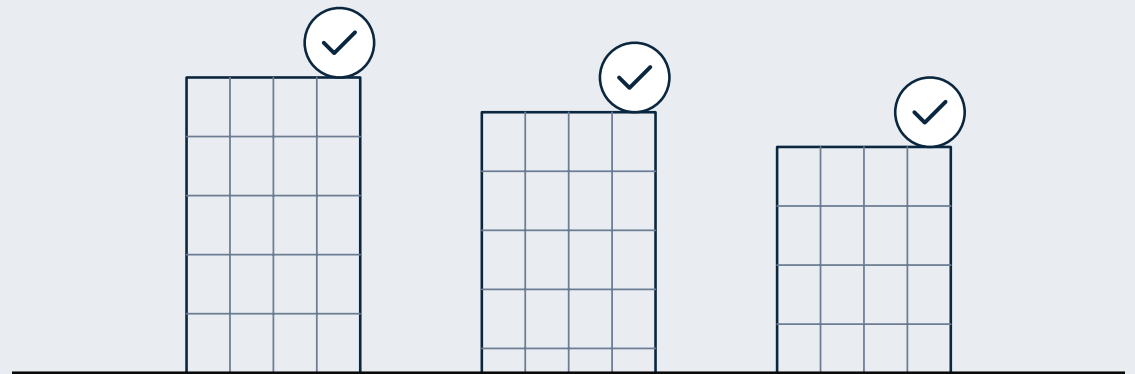

A dashboard with warning lights, a multi-year plan and ongoing management, from one office to an entire portfolio.

10 PUBLIC REGISTER

Anyone can check it.

Every certificate is in the public register,
searchable by address.

The standard for digital real estate.
